DAMPROOFING

PART 1: GENERAL

1.01 Scope of Standard

A. This standard provides general guidance concerning the specific preferences of the University of Texas at Austin for materials to provide resistance to moisture penetration through foundation walls and similar surfaces subject to high humidity, dampness and direct water contact, but not subject to hydrostatic pressures.

B. UT recognizes that project conditions and requirements vary, thus precluding the absolute adherence to the items identified herein in all cases. However, unless there is adequate written justification, it is expected that these guidelines will govern the design and specifications for UT projects.

1.02 Quality Control

A. UT-Austin campus standards require that any dampproofing be compatible with the substrate or primer on which it is adhered. Also, verify compatibility of flashing material and adhesives with damp proofing materials.

PART 2: PRODUCTS – NOT USED

PART 3: EXECUTION – NOT USED
